

NEW-JERSEY DOM.

For the year ending May 1, 1874, there were in Elizabeth 173 marriages, 701 births, and 273 deaths.

The Episcopal General Convention having decided to divide the New-Jersey into two dioceses, Bishop Odenheimer has selected the Northern Diocese as his own.

The Erie Railway Company have sold most of their land between Hoboken and Jersey City, and propose to locate their shops elsewhere.

A handsome fountain worth \$1,300 is being constructed in the Hackensack Green.

THE PENNSYLVANIA RAILROAD.—One of the most important railroad documents that have appeared for a long time is the recently published "Report of the Investigating Committee of the Pennsylvania Railroad Company."

The total number of miles of railroad and canal directly controlled by the company is stated in the report to be 5,333.6-10 of which 5,333.6-10 are railroad and 408 canal. The total amount of capital represented, including bonds, is stated at \$398,267,675.28, and the net earnings in 1873 at \$25,476,399.06, being an average of 6.39 per cent. The amount earned for the stockholders of the Pennsylvania Railroad in that year is estimated by the committee at 12.50-100 per cent. on the stock. The number of miles of railroad controlled by the company is, we may here remark, about 360 greater than the whole railroad mileage of the State of New York, and about 200 miles greater than that of all New England.

The capital stock of the company is stated at \$67,000,750, full paid, and \$1,067,725, part paid—in all \$68,144,475.

LIGHT WAVES.
Light is a force, and science holds that it is made up of impulses. Nature has been shown to conform all kinds of dynamical effects to rhythmic pulsing, as wave-like action and the impulses of light are held to be of the same kind. There are, at any rate, measurable effects which are unequal in the different colored lights, and the scale has been determined. In an inch of violet light it is shown that there are no less than 57,000 waves, a statement in which there is nothing extraordinary or impossible, as Robert, the German optician, is in the habit of ruling his microscopical test-plates at rates all the way from 100,000 to 200,000 per inch. But, when we are told that the ray enters the eye at the rate of 183,000 miles per second, and as each inch contains 54,000 waves, that when we are looking at a violet object there are 599,000,000,000,000 beats upon the retina each second, the statement baffles all imagination, we may accept, but cannot understand it. —*Popular Science Monthly.*

[NOTICE BY REQUEST.]

"The way men put of import matters to the last moment is one of the curious things in nature. The fifth concert in aid of the Public Library of Kentucky was advertised to take place July 31st. The day after, August 1st, Gov. Bramlette, the manager, at Louisville, received over \$50,000 for tickets. Had the drawing taken place at that time the Governor would have had to send the money back, but as the concert was postponed to November 30th, it was all right with them. We presume that on the first day of December next, the day after the concert, thousands of dollars will be received, one day too late, for there will be no further postponement. This money might just as well have been sent a week before, as when it was."

A Substitute for Quinine

For years, quinine was regarded as the only specific for malarial diseases and numerous quantities of the drug were annually consumed throughout our western country. More particularly along the river bottoms and adjoining low lands.

With the fall months the malarial in all its varied forms, attacks like an epidemic throughout the land, and while some are prevailing with chills and fever, the entire population shivering with cold, the quinine is generally failed to effect a cure. It is invariably derided the "chill cure," producing nausea, vertigo and fugitive pains in the head, such an extent that months "lapsed" ere the system recovered from its effects. These objections to its use were so marked that the quinine in the reduction of Malaria's R-R-Bitters was hailed as a triumph in medicine. Infinitely more certain in its beneficial effects than quinine, it possesses none of the demerits of that drug. Instead of nauseating, it tones and invigorates the stomach, and while speedily expelling the malarial humors, increases the appetite and facilitates digestion, thus rendering the system stronger and better fitted to resist the attacks of disease. In fact, a judicious use of Malaria's R-Bitters at this season of the year will prevent the recurrence of this disease, even in those who have never possessed an autumn wither. An extract of twenty years' experience, it is the greatest ANTI-MALARIAL known to medical science.

There are, perhaps, no diseases so subject to climatic changes as affections of the Kidneys. Hundreds of our farmers, mechanics and laboring men, strong and healthy in all other respects, suffer continual inconvenience and occasional agony excruciating pains in the back and loins, and the urine is dark and opaque, and frequently contains in its fluid. These symptoms, resulting from some strain or heavy labor (perhaps years ago) and aggravated by early changes in the weather. Every slight cold directed to this one weak spot, and unless promptly attended to the disease becomes chronic, and the sufferer is doomed to a miserable wreck. Malaria's R-Bitters is the only certain remedy for this class of diseases. It has a peculiar tendency to the kidneys, stimulates them to healthy action, and removing the causes, prevents the formation of brick-dust deposits which, if permitted to continue, will by obstruction form gravel stones, and necessitate painful operations for its removal. By the judicious use of this medicine, are universal recognized as specific for all complaints of the urinary organs. In Liver Complaint, Dropsy, all disorders of the Bladder and affections of the Throat and Lungs, it is equally certain and efficacious, while as a remedy for the urinary system, it is the most reliable and powerful. It is sold in all the principal cities, and is the only medicine that has been selected by all the leading and general dealers.

"Infants riches in a little room."—MARLOWE.

BRICE-BRAC SERIES.

Personal Reminiscences of Famous Poets and Novelists, with Humorous Anecdotes, Artists, Actors, Musicians, and the like.

EDITED BY

RICHARD HENRY STODARD.

Each 1 vol., square 12mo., cloth, \$1.50.

The volumes already issued have been

of the Brice-Brac Series, a wide and

permanent popularity. New volumes are

being published and will be issued during the coming

season. It is the aim to gather up in this

collection, from the numerous biographies, autobiographies and memoirs that have already

appeared, all the reminiscences worth

preservation of the men and women who

have done so much to make this century

one of the most brilliant in the annals of

English literature. Each volume will be

complete in itself. A careful index will

be given of the above biographies, and the

different volumes in this series, under the

capable editorship of Mr. R. H. Stodard,

it may safely be asserted that there will be

brought together a fund of choice and

fresh anecdotes and gossip, enough, not

only to justify the general title of the

series, but the line of Marlowe which has

been selected as its motto, "Infants riches

in a little room."

RECENTLY PUBLISHED

Vols. I, II and III of the series.

I. Personal Reminiscences by Chatterley,

Planché, and Young.

II. Anecdote Biographies of Thackeray

and Dickens.
